

CLAIMS

1. Semi-open mask comprising of:

an upper naso-pyramidal part (1) covering the nasal pyramid and the nose, having a molded edge to contact the face of the mask 's wearer (6); and

a body (2), whose anterior face has a discreetly convex surface inwards (5), so that the exhaled air moves exclusively downwards due to the Coanda effect, and which has the semi-open lower part (3), allowing the free passage of breathing air (4), having a molded edge to contact the face of the mask's wearer (6).

2. Semi-open mask of claim 1, **further comprised** of a strap (9) provided with a fastening system (10), of velcro, staple or buckle type, and the fastening elements (12), so that, it can be worn by attaching to the spectacle frame (8), or by attaching to a support frame, and in order to secure the assembly, the nose pads (11) must be anterior to the fasteners (12).

3. Semi-open mask according to claim 1, **wherein said**, it can be worn fixed to the ears by means of elastic bands (13).

4. Semi-open mask according to claim 1, **wherein** the naso-pyramidal part (1) is **further comprised** of a striated element (14), so that it can be fixed directly on the naso-pyramidal part (1).

5. Semi-open mask according to claims 1, 2, 3 and 4, **wherein** the naso-pyramidal part (1) is **further comprised** of an adjustable element (7), so that it can be better adjusted at the nasal pyramid.
